Dylan Salmo

San Dimas, CA • dylancsalmo@gmail.com • github.com/deeish • dylansalmo.com

EDUCATION

B.S. in Computer Science, Graduated December 2025
California State University, Fullerton • GPA: 3.5

Relevant coursework: Algorithm Engineering, Operating System Concepts, File Structure & Database, Software Engineering, Web Front-End Engineering, Computer Organization & Assembly Language, Computer Communications, Linear Algebra, Artificial Intelligence, Senior Capstone Project

PROFESSIONAL EXPERIENCE

Agiline Software • Glendora, CA **May 2023 - September 2023**
Software Engineering Intern

- Picked up SQL on the job and worked through a senior engineer's problem set against a large multi-schema database, writing joins, aggregations, filters, and validation queries and checking each result against expected output.
- Sourced three decades of public earthquake data, cleaned and reshaped it with Python and pandas, and presented trends over time, activity by region, and magnitude distribution as summary statistics and an interactive GIS map to the senior engineer and team.
- Tested REST API endpoints in Postman across request/response contracts, edge cases, and error handling, and documented defects for the engineering team.

Software Engineering Intern *June 2022 - August 2022*

- Built React components for a client-facing web application and integrated them with backend REST endpoints to render dynamic data and handle user input.
- Shipped features and bug fixes in an agile team, working from tickets through code review.

Diamond International • Cypress, CA **2015 - Present**
Sales Associate & Operations Support

- Handled customer sales and pricing, building long-term relationships with repeat clientele.
- Served as the in-house tech resource, diagnosing and resolving hardware and software issues to keep daily operations running smoothly.
- Supported inventory management, filing, and day-to-day administrative tasks across a small business environment.

PROJECTS

Jim - Workout Planner | *React Native, TypeScript, NestJS, Prisma, PostgreSQL, Supabase, Gemini* *2026 - Present*

- Solo-built a cross-platform workout planner, now in TestFlight beta: Expo/React Native client, NestJS + Prisma/PostgreSQL API, Supabase auth, deployed on Render.
- Integrated Google Gemini to generate personalized 8-week training plans, called server-side so no API key ships in the app; added a fallback provider and a rule-based generator so plans still generate when the AI call fails.
- Designed the REST API and database schema behind the mobile client, with Supabase auth tokens validated server-side on every request.
- Engineered structured exercise datasets with strict schema validation across hundreds of unique entries, supporting data-driven workout recommendations.
- Built and maintained a CI/CD pipeline in GitHub Actions, automating backend and frontend testing and deployment.

MyCabinet - Senior Capstone | *FastAPI, PostgreSQL, React Native, Alembic* *2025*

- Architected a full-stack application with a FastAPI backend and PostgreSQL database, handling schema design and migrations with Alembic.
- Developed a React Native frontend integrated with backend REST API endpoints to deliver a seamless cross-platform user experience.
- Led backend development as part of a collaborative senior capstone team, coordinating across frontend and backend workstreams.

SKILLS

Languages: Python, TypeScript, JavaScript, Java, C/C++, SQL

Frontend: React, React Native (Expo), HTML, CSS

Backend: NestJS, FastAPI, Node.js, Express

Data: PostgreSQL, SQLite, Prisma

Tools: Git, GitHub Actions, pytest, Alembic, Gemini API, pandas

Deployment: Render, Supabase, Netlify, Heroku
